

SOLARLIGHTCAP DEVELOPED BY 2C

The essential solar charging light that you wear

“ You don’t have to carry a flashlight because you’re wearing one that recharges itself during the day for use when it gets dark... ”

- UP TO 36 HOURS operation on dim*
 - UP TO 5 HOURS operation on full beam*
 - Ultra bright leds give up to 100,000 hours light!
 - Solar powered – no need for batteries
- * Based on fully charged cap. Please see specifications for charging/performance times.

SEE AND BE SEEN... EASE, CONVENIENCE, SAFETY.

- Features leading US technology
- Product designed in New Zealand. Produced in China by a US company
- FCC certified
- One size fits most people
- Environmentally friendly solar-powered. Low pollution NiMH battery stores solar energy for several months
- Charged and recharged by daylight. Up to 5 hours of light on full power. Up to 36 hours of light on other modes

- Range of designs, colors & styles
- Cap is hand washable (do not submerge peak)
- Weatherproof IP66 Floats
- Breathable cotton

- Semi-flexible pre-bent peak
- 100,000 hours ultra bright warm white LEDs
- Two discreet lights – ultra bright LEDs. Downward angle means the LEDs don’t shine into other people’s eyes
- Reserve battery – small blips or 20 minutes on dimmer after power off

Don’t venture into the outdoors without your SolarLightCap from 2C.

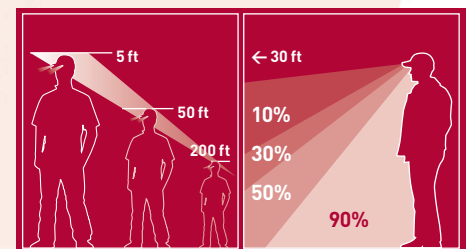

When you’re in the forest and it starts to get dark, it’s not a problem. Simply push the button on the peak of your cap and you’ve got a warm light shining at a carefully calculated angle, away from your face and other people’s eyes, out to about 6 feet in front of you...with your choice of full beam, variable dimmer settings and flashing modes. There’s even an emergency/SOS flash in case you’re in trouble and need to signal your location.

It has taken 2C nearly 5 years to develop the SolarLightCap using NewGreenThinking and special 2CTechnology to maximize performance within a good looking, ergonomic design that has already been judged a TechnoFashion Award Winner.

Smart design combined with real functionality – get your SolarLightCap now.

Sometimes the simplest ideas are the best and what could be better than a cap you wear during the day like a normal cap (recharging itself in the process) that then becomes a light when it gets darks. No need for batteries. You don’t need a spare hand to carry the flashlight. Use your head with a SolarLightCap.

And once you’ve got one, you’ll discover dozens of uses for it.

- Easy to use one-button operation. Full beam or variable dimmer settings.
- Four modes:
 - Steady on
 - Alert flasher
 - SOS blinking
 - Partyflash
- Microprocessor controlled P.W.M. operation
