

## Wind to Light

Jason Bruges Studios used our Blowlight mini LED wind turbine in their 'Wind to Light' art installation.

Wind to Light was an idea that visualized wind movement across the built form with the use of mini turbines and LEDs and drew attention to the potential of harnessing wind power as a source of energy. The installation explored the power of the wind in the city, visualising it as an ephemeral cloud of light.

The installation was custom built, using 500 Blow light mini wind turbines to generate power and illuminate hundreds of mounted LEDs, creating firefly-like fields of light, with wind visually interpreted as electronic patterns across the installation.

The piece was installed on the Southbank in London, creating a unique and thought-provoking light art piece. The 'Wind to Light' installation was commissioned by Riba London and onedotzero for Architecture week 2007 .
